

Weekly Activity – 2D Design Practice

This activity will help you learn how to use a **vector design program (2D Design)**.

Your task is to design a **two-layer key tag (keychain)**.

- **Layer 1 (Base layer):**
 - Create the outline of a shape of your choice
 - (e.g. game controller, cricket bat, simple icon)
- **Layer 2 (Top layer):**
 - Add details to the design
 - (e.g. buttons, text, or your name)

Design requirements:

- Must have **two clear layers**
- Maximum size: **80 mm × 50 mm**
- Design must be **simple and suitable for laser cutting**

Once complete, **export your design from 2D Design and upload it to the assignment section in Google Classroom.**

This task is about **learning the software**, not making something perfect.
